

ADD-ON DLL PAGE

If you want to share code for Windows API calls, use the [Shared Code](#) area. Use this page for add-on DLLs.

If you have a DLL that works with Liberty BASIC, you can upload it to this site. Please put it into a Zip file that includes the DLL and the documentation in Liberty BASIC syntax. (There is a 5 megabyte file size limit.) A sample program that uses the DLL would be nice, too.

You can also create a page for a DLL with example code and/or documentation, so that others can see how it works before taking the time to download it.

If you are having trouble making a DLL work with Liberty BASIC, put it into the [DLL Help Area](#).

Make sure you have permission from the author to republish the DLL if it is not your own work.
