

Get Name of Day Function

How can you find out what the day name is for a given date? This function will return that value in a string if passed a date in the format mm/dd/yyyy.

```
PRINT dayname$("10/1/1998")
```

```
FUNCTION dayname$(dt$)
days$ = "Tuesday Wednesday Thursday Friday Saturday Sunday Monday"
dayname$ = word$(days$, (DATE$(dt$) MOD 7)+1)
END FUNCTION
```
